PHOTOGRAPHS SHOWING DEVELOPMENT PROGRESS

May 2014

Final discharge pond with central island in background

View to the east towards quarry entrance

Native cabbage trees (3-4 years old) grown from collected seeds

View towards quarry from Pond 2

View from top of "island" towards quarry entrance

Flat topped boulders serve as picnic tables

Pond 1 showing levee and pastoral land (Buckley farm) in background

Cabbage trees starting to flourish

Bacteria living on roots if the Raupo rushes are very effective nitrate removers

Birds

Pacific swallows can be seen flitting over Pond 1

NZ Scaup (Black teal) have made the wetlands their home

White faced heron are also regularly seen

Pukeko (swamp hen) roosting on log.

Pūkeko are probably one of the most recognised native birds in New Zealand with its distinctive colourings and habit of feeding on the ground. It is found all over New Zealand. Commonly seen along marshy roadsides and low-lying open country, the bird's range has increased with agricultural development. Unlike many other native birds, the pūkeko has adapted well to new habitats, such as grassed paddocks, croplands and even city parks, a necessity brought about by disappearing wetlands. However, the pūkeko is essentially a bird of swampy ground, lagoons, reeds, rushes and swamps.
