

Stage 2 Planting

Stage 2 planting (infill between more established shrubs)

Stage 2 planting along edge of Pond 1

Bark mulch was spread generously to retain moisture during dry season

Maintenance

Removal of sediments near rock filter culvert between Ponds 1 and 2 with a long-reach digger is used only on an “as-required” basis

Recent photos – Feb 2019

All ponds now feature prolific growth of grasses, sedges etc

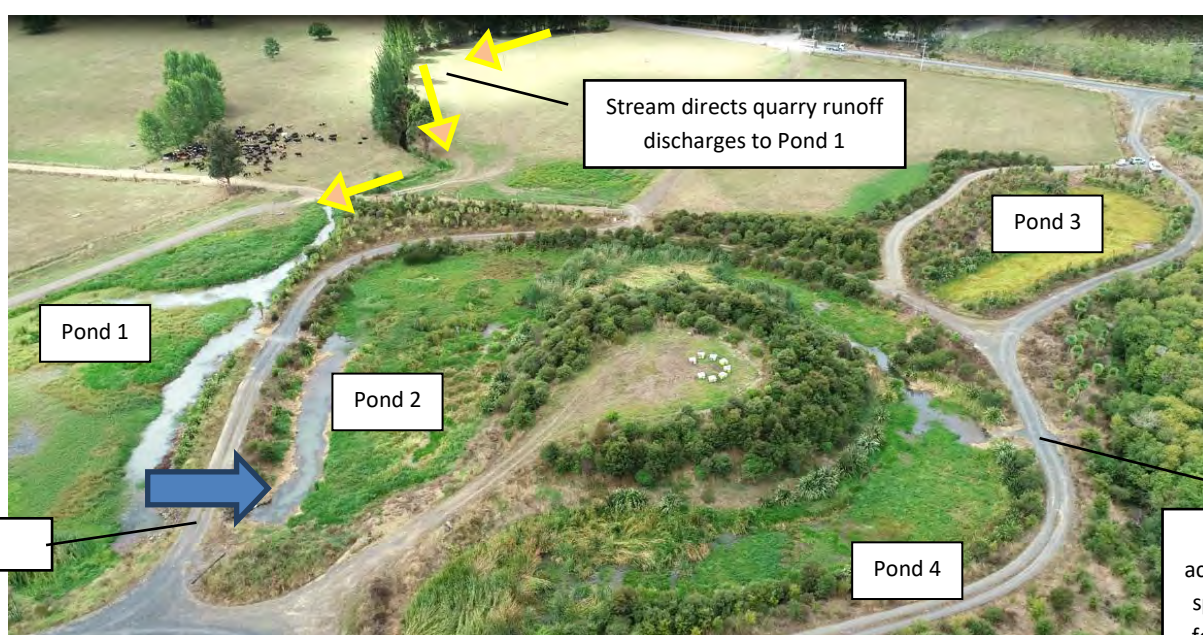

Trees are well established on the central island

Hives of bees ideally located on top of island, sheltered from wind by trees.
Bees obtain nectar from nearby manuka trees

Wetlands ponds mostly infilled with grasses, sedges
